Abstract	:	
The purpose of this survey study was to identify the chest problems in diabetics and describing them , and determining the degree to which these problems differ in diabetics in terms of : Age , Sex , duration of disease , level of education , type of occupation , habits (Smoking , alcohol drinking) , physical activity and residence. The study was conducted on 1000 diabetic patients from four hospitals in Cairo and Giza (Kasr EI-Aini, Bolak EI-Dakrour , Om EI-Massryeen and AI-Ayatt hospitals) . The results showed that the prevalence of chest problemes were in (270) subjects (27%) of the total sample . Recurrent chest infection was the heighly occurrence chest disease in diabetics followed by chronic obstructive pulmonary disease (C.O.P.D.), Pneumonia and Finally T.B.
