Title	:	Comparative study on different modalities of physiotherapeutical treatment in cases of cervical spondylosis.
Dept.	:	Physical Therapy Department for musculoskeletal disorder and its Surgery.
Supervisors	1.	Mohamed Gamil El Hanak.
	2.	Youssef Ghabour.
Degree	:	Master.
Year	:	1977.
Abstract	:	
<p>The aim of this study is to compare between the results of two programs of physiotherapeutical treatment adopted for the treatment of patients complaining from cervical spondylosis . Twenty four patients complaining from cervical spondylosis were collected then divided into two groups , group A and group B , each group included 12 patients . All the patients of both groups were treated for 6 subsequent weeks in the out patient clinic of the phsical therapy department - Kasr El Eini Hospital . Patients of group A were treated by heat , massage , and exercises . Patients of group B were treated by heat , traction , massage , and exercises . Results after treatment : The Results of treatment were classified into good fair and poor . After the end of treatment comparison between the results of group A and group B showed that in group A good results were obtained in 6 patients (50%) , fair in 2 patients (16.67%) and poor in 4 patients (33.33%) . In group B good results were obatined in 8 patients (66.67%) , fair in one patient (8.33%) and poor in 3 patients (25%) . The comparison therefore demonstrated that patients of group B gave better results than patients of group A SO the program of treatment adopted for group Bis more valuable than the program adopted for group A .</p>

Title	:	Postural faults their incidence, causes and treatment in young adults.
Dept.	:	Physical Therapy Department for musculoskeletal disorder and its Surgery.
Supervisors	1.	Ahmed Omar Zaafan.
	2.	Abd El Rahman Shabara.
Degree	:	Master.
Year	:	1977.
Abstract	:	
The study was carried out on 50 patients with postural faults especially round shoulders and sway back . The students were examined medically and physically and as a result of this examination shows high incidence of postural faults . The common cause of these postural faults were poor habits and nutritional disorders. The program of exercises contain stretching exercises strengthening exercises and re-education of good posture . The results of this program was very effective. Our advice here is to discover the postural faults early and give this program of this exercises to the patients with round shoulders and sway back .
